## TIFF tool 1.1

TIFF tool allows you extensive control and processing of TIFF files.

**TIFF tool gives you Automated Power over your TIFF files!**

**View information from TIFF tags**

See each TIFF tag contained in your source file. This includes all TIFF-IT tags, as well. You will see:

- Tag name

- Tag Data Type
- Tag Data Count
- The Data stored in the tag or at the Data offset

### **Add / Modify Information Tags**

TIFF files can contain many tags for information purposes. Any of these tags can be added or modified with TIFF tool. A small sampling of these tags:

Artist, Copyright, DateTime, DocumentName, HostComputer, ImageDescription...

The list goes on! This is perfect for keeping libraries of TIFF files that are searchable by specific tags.

### **Determine TIFF-IT Compliance**

See whether or not your TIFF files contain mandatory information to comply with the various TIFF-IT specifications. Also, view a log that tells you what items were checked and what their outcome was.

### **View / Save a Comprehensive Tag Log**

A log screen shows you ALL tag information for the currently-open TIFF file. You can choose to save this log to a file with Mac or PC linefeeds for later processing.

### **Export to PostScript**

Embed your TIFF files in PostScript for direct output without the need for any other programs. Supports LZW and Group 4 Fax encodings to keep those files smaller.

### **Save in Other File Formats**

Save your TIFF files in many other formats, including:

- PNG
- JPEG
- BMP
- Targa
- Photoshop Native

### **Create Watch Folders to Automate Most Functions**

You can create an unlimited number of Watched Folders -- folders that are scanned periodically for newly-added files. These files will then be processed in whatever manner you specify when making the Watched Folder, then moved into a "Processed" folder inside the same Watched Folder.

Supported automation functions include:

- Export to PostScript
- Save to other file formats
- Change from multi-strip to single-strip

- Change from single-strip to multi-strip
- Generate and save tag log
- Add / Modify information tags

## **TIFF tool 1.1 will be available by the end of March**

**Download not currently available!**

<b>Get the PowerMac Version Here</b>	<b>Get the Windows Beta Here</b>
MacBinary: <a href="#">TIFTo11.bin (498k)</a>	Removed temporarily!
BinHex: <a href="#">TIFTo11.hqx (676k)</a>	
<p>TIFF tool 1.1 runs on Power Macintosh with system 7.6.1 or above and at least 4 Meg of RAM available. Quicktime 4 is required for some image exporting.</p> <p>A 68K version will be available as soon as a bug in my development environment is fixed.</p> <p>The Windows version posted here has NOT been thoroughly tested.</p>
